

Gasket and Paint Stripper

Bardahl Gasket and Paint Stripper is a highly active remover of old gaskets and carbon deposit off all kind of engines (car, truck, motorcycles, boats, etc.) It is also developed for fast clean, efficient removal of paint, varnish, lacquer and industrial finishes from wood, metal, GRP, ceramic and many other surfaces.

It will remove most cellulose, acrylic, alkyd, p/u alkyd, but mastic and vinyl paints.

The action

Bardahl Gasket and Paint Stripper acts to break the bond between the coating and the surface. This exceeds by capillary action; it creeps under the coating to cause blistering and softening. It will not remove two-pack polyurethane, two-pack epoxy or vitrons enamel.

Because of the viscous nature the product will cling to vertical and overhead surfaces without running off.

Bardahl Gasket and Paint Stripper is a blend of highly active paint stripping solvents, cellulose thickening agents and sealant wax. It sprays to give a viscous jet of milky white liquid that rapidly dries to a skin on the surface. This helps prevent loss of the effective solvents to maximise their stripping effects.

- Product will cling to surfaces for better application
- It is economical in use and reduces the need for multiple applications.

Directions of use

Spray directly into the area to be treated. Leave for a short time until blistering is observed. Remove with a suitable scraper. Repeat as necessary. When treatment is complete, wash with soapy water.
