

Spray Glue

Bardahl Spray Glue is a high strength, multi purpose adhesive packaged in convenient and easy to use form. It will bond paper, fabric, foam rubber, sponge rubber, fibrous glass insulation, polyurethane foam, carper tiles, foils, cork, felt and cardboard.

Bonds will be either permanent or temporary depending on application technique.

Bardahl Spray Glue dries almost immediately, yet retains its tack and bonding capacity for several hours. It has numerous uses in the office, factory, home and hobby shop. Use where quick, clean of adhesives is desired.

Application

Shake can before using. Hold the can 20 to 25 cm from the object. Depress the tip firmly and apply an even coating of adhesive. If the tip becomes clogged, it may be cleaned with turpentine or naphtha. Care should be exercised when removing and replacing tip.

Temporary Bonding

Spray thin, even film on the back of the object to be bonded. Allow the adhesive to dry a few seconds and then place in the desired position and press. When removal is desired, simply work one corner loose and peel back. Excellent for attaching labels, mounting photographs, installing carpet tiles and palletizing cartons and bags.

Permanent Bonding

Spray a liberal film of adhesive on the back of the object to be bonded and bond while wet. Bonds made in this way cannot be broken without considerable effort and without leaving adhesive on both surfaces.

The preferred method for bonding non-porous materials on foams is to spray both surfaces with a medium coat and allow them to dry several minutes before assembling. Bonds may be completed hours later with only light contact pressure. If necessary, the surface can be reactivated with a thin overcoat of adhesive.

Clean up

To clean, invert can and depress tip until adhesive is cleared. Replace cap and store in a cool place away from direct sunlight. Clean up overspray and adhesive smears with cleaner & thinner or turpentine.

Danger

Extremely flammable. Keep away from heat, sparks or open flame. Use only in well ventilated areas.

Contents under pressure. Store in a cool place away from direct sunlight, radiators, stoves and other sources of heat. Do not puncture can or throw in fire or incinerator. Do not store above 50°C.

Product information

Analytical-data

Appearance	:	Translucent amber
Base	:	Synthetic rubber
Contents	:	500ml.
Non-volatiles	:	19,5%
Shelf life	:	One-year minimum at room temperature
Coverage	:	Approx. 1 sq. meter per can
Flash point	:	Below 21°C (see caution)

The spray is propelled by a non-polluting gaze.

Article number	76205
Contents	500 ml
