

DINITROL® Corroheat 4010

VHT Corrosion Protection for Engines

DINITROL Corroheat 4010 is specifically designed for engine compartments and creates a hard, transparent film that is resistant to both alkaline and acids whilst providing heat resistant up to a temperature of more than 200°C

The adhesion and flexibility properties on rubber and plastic parts are also very good at both low and high temperatures

Appropriate parts to be treated with DINITROL 4010 are engine compartments, engines and other parts which have to withstand high temperatures.

Available in many canister sizes as well as a D.I.Y. Engine Corrosion protection kit bundle with specialist nozzle attachment

Available Sizes:- 500ml Aerosol / 1ltr Can / 10ltr Can / 20ltr Pail / 60ltr Drum / 208ltr Drum
