

DINITROL® ML

Specialist Cavity Wax

Brown cavity wax for doors, frame members and exterior joints and crevices

The oil based brown coloured product is specially designed for applying into closed cavities such as doors, frame members and exterior joints and crevices. DINITROL ML is a penetrating cavity wax ideal for rust-proofing second-hand cars, trucks, buses and other commercial vehicles.

Please note: When applying a cavity wax coating by injecting the product into closed cavities via pre-drilled holes. It's important you follow a DINITROL spray diagram to avoid damaging any safety feature sensors in the doors for example. We also recommend pulling out the seat belts fully to ensure they are not mistakenly coated by the cavity wax treatment when injecting into the vehicle central support pillar section.

Due to it's highly penetrating characteristics this product is currently applied to commercial vehicles including trucks, vans, coaches and buses throughout the UK. The cavity wax treatment coating also has an approximate drying time of 1 hour for convenience dependent on weather conditions and can also be easily removed with white spirit if required.

Available Sizes:- 500ml Aerosol / 1ltr Can / 5ltr Can / 20ltr Pail / 60ltr Drum / 208ltr Drum
