

DINITROL®

# DINITROL® RC900 Converrust

Specialist Rust Converter & Primer

The specialist rust converter contains a complex organic chelat base and epoxy resin. DINITROL RC 900 actively converts rust on substrates into a stable organic iron complex. Once the product is dry, an impermeable barrier against further corrosion is formed.

DINITROL RC 900 penetrates rust 7 to 10 times deeper than standard rust converters. The product forms a strong dry adhesive film that provides a suitable base for paintwork and other corrosion protection products

Please note: DINITROL RC900 is a highly technological advanced product with a complicated chemical formulation. The product only works at temperatures above 10 degrees and must be allowed to fully dry. Guidelines stipulate at standard atmospheric conditions 15 degrees and humidity of 60% the average drying time is 24 hours. Sometimes multiple coats must be applied before the corrosion is fully converted into a deep black colour providing indication that the area has been treated.  
(When applying multiple coats you must make sure that the earlier coating is completely dry)

Available Sizes:- 400ml Aerosol
